

Fiberglass Elbows with DBII PVC Couplings for:

Utilities

Data Centers

Below Ground Installations

FRE Composites Elbows w/ DBII PVC Couplings

are reliable, high quality, and long-lasting for a wide range of applications including direct burial and concrete encasement.

With outstanding mechanical and engineering properties, an FRE Elbow with factory assembled DBII couplings can deliver high impact resistance, crush strength, and a low coefficient of friction.

Featuring:

- Lightweight design for easy handling in the field
- Superior strength to weight ratio compared to other materials
- Lower coefficient of friction than PVC eliminating cable burn through
- Easy transition into DBII PVC System
- Cost effective material and installation
